LEAN 5S

Le Lean est une méthodologie de gestion qui vise à maximiser l'efficacité en éliminant le gaspillage, ce qui signifie réduire tout ce qui n'ajoute pas de valeur au processus.

Les 5S sont un outil clé du Lean, constitué de cinq étapes **Trier, Ranger, Nettoyer, Normaliser, Respecter** qui visent à organiser l'environnement de travail, améliorer la productivité et réduire les erreurs.

Le Lean et les 5S sont largement utilisés dans l'industrie pour optimiser la production, réduire les coûts et améliorer la qualité des produits et services.

En résumé, le Lean et les 5S sont des approches qui encouragent l'efficacité, la propreté et l'ordre sur le lieu de travail pour obtenir de meilleurs résultats

SYSTEME D'IDENTIFICATION

CLASSIFICATION	ARTICLE N°		EPAISSEUR	POIDS/LONGUEUR	TYPE
	ABS	ESD			
TUBE A REVETEMENT ABS	TA2018	TC2810	Ø28xT1,0	2,750KG	
	TA20280	TC2020	Ø28xT2,0	4,400KG	
TUBE INOX	TI2812		Ø28xT1,2	3,300KG	

CODIFICATION DES COULEURS

Nos tubes sont fabriqués en acier et revêtus d'une couche de résine **ABS**. Ce revêtement en ABS **prévient** l'oxydation et confère une **résistance** exceptionnelle à l'usure ainsi qu'aux impacts.

Le tube **ESD** est fabriqué en utilisant de l'**ABS**, et présente une **conductivité électrique faible**. Lorsqu'il est associé à un raccord Nickelée, il convient à une utilisation dans des environnements sensibles aux charges électrostatiques.

SOMMAIRE

LES TUBES

Fabriqué à partir d'acier inoxydable de première qualité, notre tube en acier inox est non magnétique et résiste de manière exceptionnelle à la corrosion. Il peut également être employé pour des applications ESD en étant assorti de fixations Nickelées.

ACIER INOX (IN)

Les raccords sont des éléments métalliques conçus pour relier les tubes entre eux. Ils sont disponibles en acier, avec deux options de finition :
une peinture **époxy noire** ou un traitement **Nickelé**.

Ces raccords sont assemblés en utilisant une vis et un écrou de taille M6. Grâce à une épaisseur de 2,5 mm et un serrage approprié, ces raccords offrent une excellente rigidité aux assemblages, grâce à 3 zones de grip.

LES RAILS A GALETS

SOMMAIRE

Page 39

LES RAILS A GALETS

SOMMAIRE

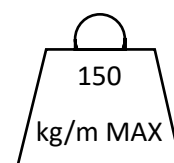

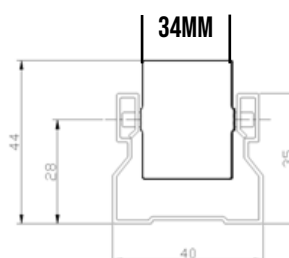

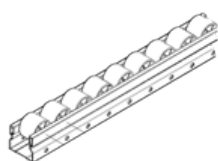

Les rails à GALETS sont des éléments utilisés pour faciliter le déplacement des charges dans divers systèmes industriels.

Ils existent en différentes largeurs (40 mm ou 85 mm) et modèles (lisses ou avec guide latéral).

Ces rails permettent un mouvement fluide des marchandises, notamment dans les systèmes de convoyage et les stockeurs dynamiques.
